

V2.03

User's Manual

PS Smart Converter

Summary

FirePlay Converter Software down loads standard .mdb access files into a PyroSeeking Host. It is a one way export to Host only App.

Loading the Smart Converter App: V2.03 Windows 7/8

Step 1: double-click VSFLEXGRID.EXE, and select "Unzip", it will add a folder "Disk1" in your computer, click this folder, and double-click flex8_T205.exe to install the VSFlex8.

Step 2: When you finished intall the VSFlex8, click the install.bat in order to disable the pop-up menu of ComponentOne when we run the SmartConverter.

Step 3: Click FirePlayConverterV2.01.exe to run SmartConverter.

Connections to the Host:

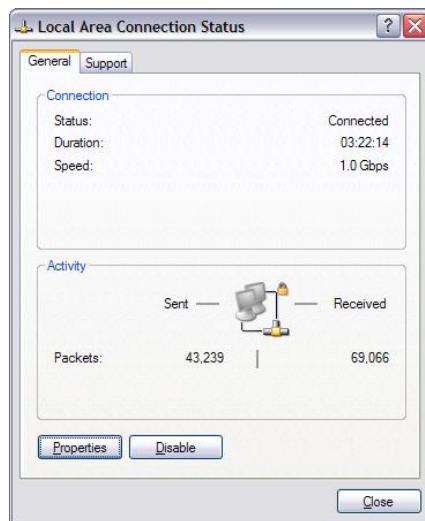

1. Ethernet Cross Connect cable is required. Can be purchased from any Radios Shack or computer store. A normal Ethernet cable will not work.
2. Connect Cross Connect cable from the output of your Computer and the other End to the PC Ethernet port on the Host.

Computer Settings:

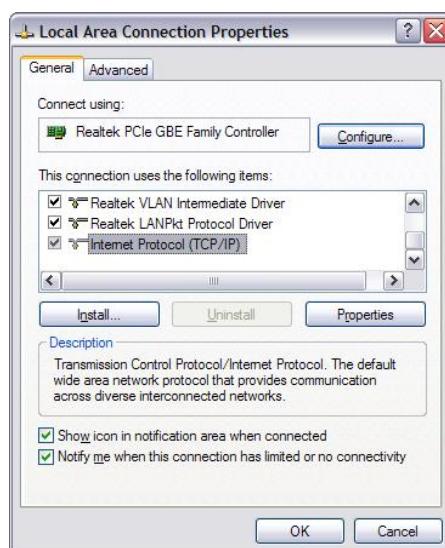

The Host is an IP Addressed device. The IP Address is: 192.168.10.100 with a subnet of 255.255.255.0

NOTE: Turn OFF the Wireless Connection on your computer.

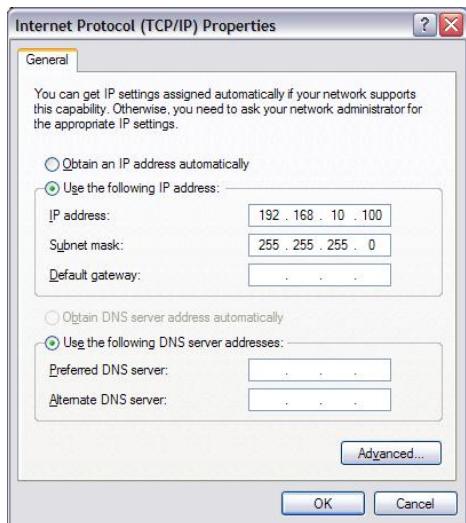

1. Go to and click properties

2. The select your TCP Internet Protocol

3. Then enter the IP address and Subnet mask and this will direct your computer directly to the Host. The Host must be turned On and the Smart Converter software opened and you will see the Host Ethernet port lights flashing Yellow and Green.

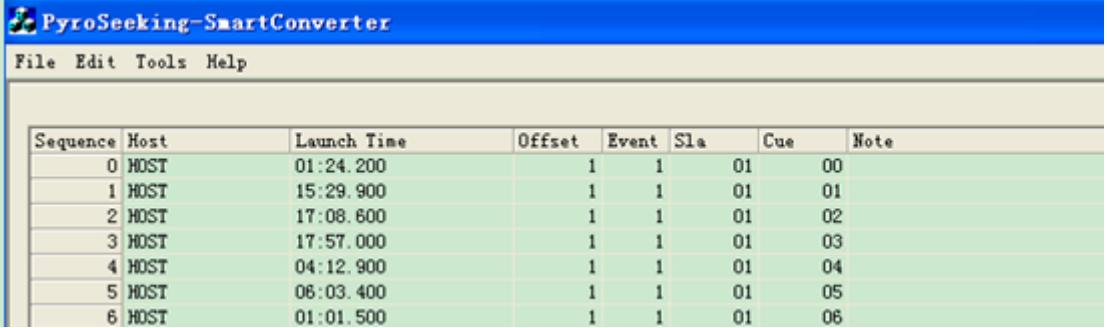

PS Host Download File requirements:

1. A Microsoft .mdb access file with a table named (tb_Layout).
2. The Table data columns in MS Access are:
 - a) **Flow ID** = Primary Key Index
 - b) **HostName** = The Host ID number
 - c) **HostIndex** = Host Index Number
 - d) **BlastTime** = E-match ignition time in milliseconds
 - e) **Addr** = Module Address 01 to 99
 - f) **Channel** = Cue numbers 00-31
 - g) **CDCode** = 0
 - h) **Sector** = 0

Importing .mdb file:

1. Open Smart Converter App.
2. Open File and select Load Database
3. Choose PyroSeeking Database option
4. Select the .mdb file you wish to use and the screen will display the show

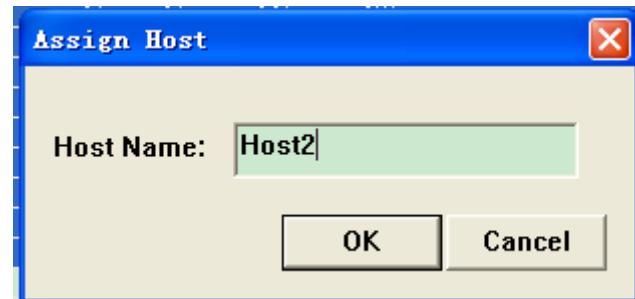

Sequence	Host	Launch Time	Offset	Event	Sla	Cue	Note
0	HOST	01:24.200		1	1	01	00
1	HOST	15:29.900		1	1	01	01
2	HOST	17:08.600		1	1	01	02
3	HOST	17:57.000		1	1	01	03
4	HOST	04:12.900		1	1	01	04
5	HOST	08:03.400		1	1	01	05
6	HOST	01:01.500		1	1	01	06

a)

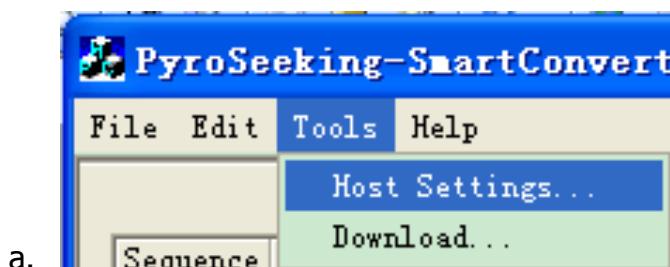

Smart Converter Downloading files in to a Host:

1. Assign Host only if you are using more than 99 modules

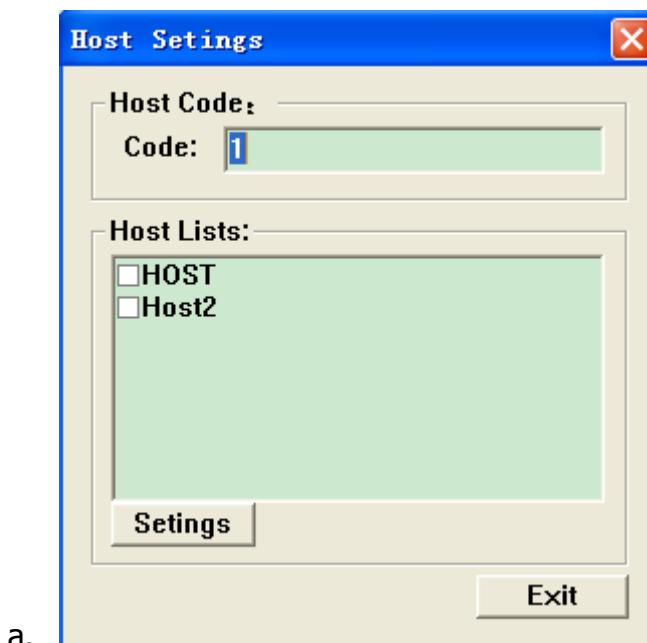

a.

2. Select the Tools and Host Settings and select .mdb file to be loaded

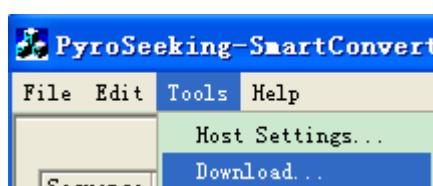

a.

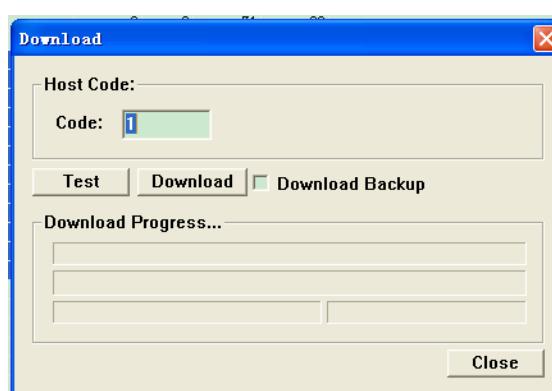

3. Click the Host Setting box for your Host and then click on Select button. The Host will clear its memory of the past show.

4. Select Tools then Download and select .mdb file to be loaded

5. Click on the Download button and the Host will download.

6. Compare loaded cue count from Host display to the number of cues in the program and they should match.
